

A detailed illustration of a human gut microbiome. The background shows a complex network of blue, translucent, interconnected structures representing the gut's internal environment. Scattered throughout are various colorful microorganisms: green and yellow rod-shaped bacteria, pink and red spherical bacteria, and some purple and blue structures. The overall scene is vibrant and represents a diverse microbial community.

MICROBIOME

微生物基因組群

A 3D illustration of the human digestive system, showing the stomach and intestines in a light blue color. The intestines are coiled and have a textured, bumpy surface. Numerous red, rod-shaped bacteria of various sizes are scattered throughout the scene, some appearing to be on the surface of the intestines. The background is a solid blue color.
